SENIOR SDET | PLAYWRIGHT & TYPESCRIPT | BANKING-DOMAIN TEST AUTOMATION

PROFESSIONAL SUMMARY

Senior SDET / Automation Test Engineer with 7+ years of experience in UI and API test automation, including banking-domain project experience at Cybage Software. Hands-on with Playwright (TypeScript), Selenium WebDriver (Java), Karate, and test automation framework design. Experienced in building and maintaining smoke and regression suites, integrating automated checks into CI/CD pipelines, and working with cross-functional Agile teams. Focused on reliable test coverage, maintainable automation, and early identification of application defects.

TECHNICAL SKILLS

Automation: Playwright, Selenium WebDriver, Karate Framework

Languages: TypeScript, Java, JavaScript

Testing: UI Testing, API Testing, Functional Testing, Regression Testing, Smoke Testing, End-to-End Testing

Frameworks & Practices: Page Object Model (POM), Data-Driven Testing, BDD, TestNG

CI/CD & Version Control: Bamboo, GitHub Actions, Jenkins, Git, Bitbucket

Tools & Collaboration: Postman, Swagger, Jira, QMetry, Agile, Scrum, Sprint Planning, Code Reviews

AI-assisted Engineering: Prompt Engineering, Model Context Protocol (MCP), AI-assisted test generation and documentation

PROFESSIONAL EXPERIENCE

Capgemini — Senior Consultant | Automation Test Lead | Aug 2024 – Aug 2026

- Designed and implemented a scalable Playwright automation framework from scratch using TypeScript for enterprise applications, improving test-authoring velocity by 30%.
- Integrated automated test suites into Bamboo CI/CD pipelines and established quality gates, reducing deployment-blocking feedback loops by 40%.
- Implemented parallel test execution to improve resource utilization and reduce regression execution time by more than 50%.
- Used MCP-based workflows and prompt engineering to support AI-assisted test generation, execution workflows, and validation.
- Led automation practices through code reviews, framework guidance, and mentoring QA engineers transitioning to TypeScript-based automation.

Cybage Software — QA Engineer | Banking-Domain Project | Jan 2022 – Aug 2024

- Worked on a banking-domain project, contributing to UI and API test automation using Playwright and the Karate Framework.
- Created and maintained automated smoke and regression scenarios to validate application behavior and help identify defects before release.
- Supported end-to-end quality validation by executing automated checks, analyzing failures, and collaborating with development and QA stakeholders on defect resolution.
- Maintained automation suites with a focus on reliability and reduced script flakiness; supported a reported pipeline pass rate of 98%+.
- Collaborated with cross-functional development, product, and DevOps teams during Agile sprints to support timely delivery of application changes.

Aptara — Test Analyst | Feb 2019 – Nov 2021

- Developed, executed, and maintained modular Selenium WebDriver automation scripts using Java and TestNG.
- Performed functional, regression, and exploratory testing to identify defects in application business logic.
- Supported QA and validation activities for eLearning migration projects, checking data transitions and application behavior.

KEY ACHIEVEMENTS

- Designed and implemented 2+ production-grade automation frameworks, reducing dependence on manual regression effort.
- Integrated parallelized regression testing into CI/CD workflows to support automated nightly builds.
- Mentored junior manual testers in automation practices and asynchronous programming concepts.

EDUCATION

Bachelor of Engineering in Information Technology | Pune University | 2017
